

Measurement Guide

Shower Curtains

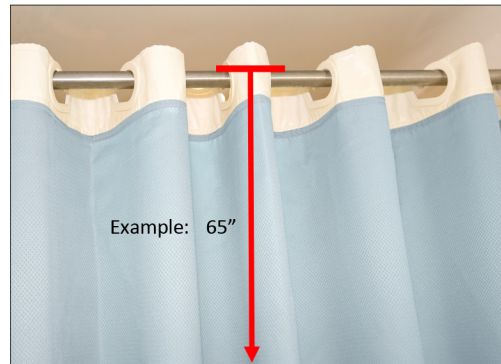

Step 1: Indicate whether you are using a bar or track for your shower curtains. If using hooks, indicate which type of hooks. (Built-in hooks, spool carriers, breakaways, Velcro, rings etc.) Indicate if Whisper Mesh is to be included.

Step 2: Measure the bottom lip height of the tub or enclosure from the enclosure's floor, if there is one. Indicate 0 if there is none.

Step 3: Measure wall to wall for width. We will automatically add a minimum of 1 foot to ensure proper fit depending on mounting type. If you prefer, state the finished size.

Step 1a: If your curtain uses a bar, measure from the top of the bar to the floor.

Step 1b: If your curtain uses hooks, measure from the bottom of the hooks to the floor.
